Business Systems, Inc.

Position: Software Application Developer

Job Description:

Design, implement, test and support web-based and desktop applications

Reports to: Software Development Manager

General Duties

- Design, implement, test and support web-based and desktop applications.
- Constantly analyze and improve application performance and response time.
- Translate functional requirements into software.
- Follow best practices for secure web development.

Special Skills

- Ability to work quickly and efficiently to meet deadlines.
- Good creative problem solving skills, an independent thinker, and a dedication to customer satisfaction.
- Positive 'can-do' attitude, energy and enthusiasm with professional business-like appearance.

Requirements Needed to Perform

- Must be competent in the development of software applications.
- Thorough understanding of VB (6 and .NET), JavaScript, ASP.Net, and HTML
- Strong MS-SQL experience.
- Must be familiar with the software development process and the software development life cycle.
- Demonstrated ability to be highly organized and work multiple assignments in a product delivery and time sensitive environment.
- Proficient in documenting code necessary for review and clarification.

Training Needed

- One to five years professional software development experience
